AFFILIATE MARKETING GUIDE

CryptoTab Affiliate Blueprint

A practical system for turning content and referrals into a recurring Bitcoin affiliate channel

Independent guide - not produced or endorsed by CryptoTab.

The opportunity in one minute

CryptoTab combines a familiar web browser with Bitcoin-earning features and a multi-level referral program. The affiliate angle is attractive because the first conversion is low-friction: instead of asking someone to buy an expensive product upfront, you can invite them to try a browser and learn the earning features for themselves.

The key message

Do not sell "a click that pays forever." Sell a simple product people can try, then focus on building an active referral network. CryptoTab currently advertises commissions across 10 referral levels, starting at 15% for direct referrals.

Getting started

These are all the tools you will need. Download them then continue with the guide.

Start with the browser:

CryptoTab Browser

Then install both of these apps for you phone:

Standard version
CT Pool

Pro version
CT Pro

1. Understand what actually creates affiliate income

A referral link is only the start. Your results depend on people joining through your link and remaining active in the CryptoTab ecosystem. CryptoTab currently advertises the following referral percentages:

1	15%
2	10%
3	5%
4	3%
5	2%
6	1%
7	0.5%
8	0.25%
9	0.125%
10	0.0625%

The structure is potentially recurring, but it is not guaranteed passive income. Referral activity, program rules, Bitcoin prices and CryptoTab product economics can all change.

2. Position it around simplicity, not hype

The easiest message to understand is not "get rich with crypto." It is:

> **Simple positioning**
>
> "You already use a browser. CryptoTab adds Bitcoin-earning features and a referral system to that everyday activity."

That gives you several strong selling angles without making unrealistic promises:

🎬 Quick setup - CryptoTab currently says installation takes less than a minute. 🎬 Familiar interface - it is designed around normal web browsing rather than a complex trading terminal.
🎬 Built-in earning features - the mining dashboard is visible and easy to demonstrate on screen. 🎬 Referral leverage - direct referrals can introduce more users, creating additional levels in your network.

🎬 Easy content demo - you can show the entire concept in a short screen recording. **3.**

Build the funnel

A simple affiliate funnel is enough to start:

> **CONTENT -> LANDING PAGE -> CRYPTOTAB -> ACTIVE USER -> REFERRAL REVENUE**
>
> Your landing page should explain the product, disclose your affiliate relationship and offer two clear actions: read the beginner guide or try CryptoTab.

Use a clean redirect on your own domain, for example:

cryptotabbrowser.com/49864903

That lets you change the destination later without editing every old PDF, post or video description. **4.**

Use content that demonstrates instead of overselling

The best-performing affiliate content usually answers a question or demonstrates a result. Build posts around curiosity and proof rather than repeating a naked referral link.

🎬 "I replaced Chrome with this Bitcoin browser for a week."
🎬 "How CryptoTab actually works in under 30 seconds."
🎬 "Can a browser really earn Bitcoin? Here is what the dashboard looks like." 🎬

"I tested CryptoTab so you can see the setup before installing it."

- "The part of CryptoTab most people miss: the referral network."
- "How I would build a CryptoTab referral network from zero."

Best practice

If you show earnings, show only genuine, reproducible results and explain the time period and conditions. Avoid fabricated balances, guaranteed return claims or language suggesting everyone will earn the same amount.

5. A 30-second short-form video formula

0-3 sec	Hook: "This browser has Bitcoin-earning features built in."
3-8 sec	Open CryptoTab and show the normal browser interface.
8-15 sec	Show the mining/earning dashboard and where it is activated.
15-22 sec	Show the referral area and explain that the network can extend through multiple levels.
22-30 sec	CTA: "I made a free beginner guide - link in bio."

6. Optimize for active referrals

The goal is not the highest click count. It is the highest number of people who join, understand the product and continue using it. After a referral joins, give them useful onboarding content:

- How to sign in and keep the same account across supported devices.
- Where the earning dashboard is located.
- How CryptoTab describes CPU mining and Cloud.Boost.
- How withdrawals work and where to verify the current minimum.
- How their own referral link works if they want to share the product.

7. Measure the funnel

Track the source of every campaign. A spreadsheet with five columns is enough at the beginning: platform, content, clicks, active referrals and affiliate earnings. After a few weeks, you can stop

guessing and focus on the traffic sources that create active users rather than vanity metrics.

The metric that matters

Revenue per active referral is more useful than raw views. A video with 5,000 targeted views can be more valuable than one with 500,000 low-intent views.

8. Your first 30 days

1. Install CryptoTab and learn the interface well enough to demonstrate it clearly.

Create your landing page and clean /go/browser, /go/pool and /go/pro redirects.

2. Publish one useful beginner guide and one affiliate-focused guide.
3. Create 10 short-form videos using different hooks but the same core demonstration. 4. Publish one longer tutorial that can rank in search and answer common objections. 5. Track which content creates active referrals.
6. Double down on the formats and platforms that produce the best active-user rate.

Disclosure and claims

Affiliate marketing works better long-term when the relationship is transparent. Use a clear statement near affiliate links, such as:

Suggested disclosure

Affiliate link: I may receive a referral reward if you sign up or use CryptoTab through this link.

Avoid saying that users will make money "easily," "instantly," or "guaranteed." A stronger and more defensible claim is that CryptoTab is quick to set up and gives users an accessible way to experiment with Bitcoin-earning features.
